

INSTRUCTIONS FOR METAL FRAME ASSEMBLY

Join the two parts of the metal stand to the panel by inserting 2 half-inch bolts on each side of the panel.

For your information:

To increase the ease of operation, we have introduced a new combination switch and battery holder; this may be used in place of the two separate items now listed in the GENIAC MANUAL, by connecting one lead of the Pfahnstock clip and the other, grounded, to the bolt holding the switch to the panel.

Instead of the cray-off pencil listed, we now provide a Book of Labels.
